

Table 1: Specific wording of all disorder scenarios

Scenario	Specific wording	Example Disorder
#1	If a child is found to have this disorder at birth, the child can receive an intervention/treatment in the form of a special diet and will grow up with normal physical and mental abilities.	PKU
#2	Even if a child is found to have this disorder at birth, the child cannot receive any intervention/treatment until signs of the disorder appear.	DMD
#3	If a child is found to have this disorder at birth, the child's family will know of the diagnosis much sooner, but intervention/ treatment cannot begin until signs of the disorder appear.	DMD
#4	If a child is found to have this disorder at birth, the child can receive an intervention/treatment in the form of education that will help with his or her mental abilities later in life.	Fragile-X
#5	If a child is found to have this disorder at birth, the child's parents could find out that future children have an increased chance of also having the disorder.	Most Conditions
#6	If a child is found to have this disorder at birth, the child's parents would know that they themselves are at an increased chance of developing the disorder. Individuals with this disorder do not show signs of the disorder until their adult years.	HD
#7	If a child is found to have this disorder at birth, the child may be able to receive an intervention/treatment in the form of additional help from the state. This help may include, for example, monetary disability benefits or other supportive services.	Marfan Syndrome
#8	If a child is found to have this disorder at birth, the child can be enrolled in a research study for experimental medication. There is no guarantee that individuals in the study will be saved by the experimental medication, but other affected individuals in the future may be saved.	MLD Metachromatic leukodystrophy
#9	If a child is found to have this disorder at birth, the child can receive a risky intervention/treatment with the potential to add 6 months to the child's life. Most of this time will be spent in and out of the hospital.	LSDs
#10	If a child is found to have this disorder at birth, the child can receive a risky intervention/treatment with the potential to add 3 years to the child's life. Most of this time will be spent in and out of the hospital.	Krabbe
#11	If a child is found to have this disorder at birth, the child can receive an intervention/treatment that will improve the child's physical abilities. The disorder's impact on the child's mental abilities cannot be reversed.	Hypothetical
#12	If a child is found to have this disorder at birth, the child can receive an intervention/treatment that will improve the child's mental abilities. The disorder's impact on the child's physical abilities cannot be reversed.	Hypothetical
