\*Percentage of difference = (postoperative - preoperative)/preoperative value × 100

BCVA: best-corrected visual acuity; IOP: intraocular pressure; logMAR: logarithm of the minimal angle of resolution; SD: standard deviation,

† $P < 0.001$ . Mann–Whitney Utest for the comparison between study groups

‡ $P \leq 0.001$ . Wilcoxon signed-ranks test for the within-group comparison of pre- and postoperative measures
